Privacy Policy

CRESTPOINT STUDIO
Effective date: November 22, 2026

Crestpoint Studio is operated by Michael McPeake. This Privacy Policy explains how information is handled when you use our website and applications.

1. Information handled by our applications

Our applications may process information you enter, create, import, or select, including preferences, documents, photographs, recordings, and other app content. Many features process and store this information on your device. Certain features connect to outside services, such as radio stations, weather providers, websites, publishers, or mapping services. Those services receive the information needed to respond to your requests, which may include search terms, destination information, and your IP address.

2. Permissions and your choices

An application may request access to features such as the camera, microphone, photographs, location, or device authentication when needed for its functions. You can review and change available permissions in your device settings. Disabling a permission may prevent the related feature from working.

3. Advertising, accounts, and tracking

Our current applications do not include studio-operated user accounts, advertising networks, subscriptions, or integrated third-party analytics. Crestpoint Studio does not sell personal information or share it for cross-context behavioral advertising. Websites and other outside services accessed through an application may have their own tracking practices.

4. Sharing and outside services

When you choose to share, export, email, or upload content, the selected recipient or service receives that content. Their policies apply to the resulting copies. Information sent to outside services is not necessarily stored or controlled by Crestpoint Studio.

5. Storage, security, and deletion

Storage and protection vary by application. Some applications use encrypted local storage; others use ordinary app files protected by the operating system. No method guarantees complete security or recovery.

Use an application's available controls to manage its information. Some applications retain records or earlier versions and do not provide individual deletion controls. Deleting an application generally removes its local app-container data; offloading it may preserve that data. Backups, Keychain entries, original photographs, exported files, and recipient copies may remain separately. Preserve important information before removing an application.

6. Website and support communications

Our website does not currently include advertising, analytics scripts, or account registration. The hosting provider processes connection information needed to deliver the website.

If you contact support, we receive your email address, message, and any attachments you provide. We use this information to respond, investigate problems, and meet applicable obligations. Correspondence is retained while reasonably needed for those purposes.

7. Privacy requests and updates

Contact us to ask about personal information held by the studio or to make a request under applicable privacy law. We cannot remotely recover or delete information stored only on your device or held independently by another provider.

This policy describes current practices. We will review and update it before introducing materially different data practices or adding applications that require different disclosures.
